May 12, 2026

Dear Hiring Manager,

I am writing to apply for the Entry-Level Data Scientist position at KellyMitchell Group. I am a senior Computer Science major preparing to start my Optional Practical Training (OPT) in the summer of 2026. I have always been fascinated by emergent technologies, and I enjoy the challenge of modernizing and improving older systems. I want to be an active participant in the current history period and help create a better world by making wise use of AI, NLP, and large language models. My recent academic work in Statistical Machine Learning directly aligns with your need for someone who can clean data, build predictive models, and extract actionable insights to achieve those kinds of goals.

In my recent Early Warning Student Retention project, I focused heavily on solving problems using Python and core data libraries. I regularly used pandas and NumPy to conduct exploratory data analysis and preprocess messy datasets. From there, I built and evaluated several machine learning models, including both regression and classification algorithms, using scikit-learn. To ensure my models generalized well, I applied evaluation techniques like cross-validation and hyperparameter tuning. I managed all my project code in Jupyter Notebooks and used Git for version control, so my work was always reproducible and easy to share.

Technical skills only matter if you can explain the results. I have been an active member of the debate team at The College of Idaho and an engaged student of communication arts. Through these experiences, I learned how to clearly express complex information on a variety of different topics to a wide range of audiences. I am ready to support your analytics team in Denver, adapt quickly to your workflow, and contribute immediately to your client projects. I have attached my resume and a link to a sample data analysis for your review. Thank you for your time and consideration.

Sincerely,

Ignacio Bonmati Gonzalez
